

Did You Know That Tampa Bay's Water is Rated the 6th Hardest Water in the Nation?

Most of us fill a glass of water from the tap without giving it much thought...but maybe we should. In this area, homeowners face many challenges with hard water and well water issues. Conditioning your water can solve the issues created by these two common culprits that cause everything from iron stains on fixtures and appliances, a rotten-egg odor, rashes, dry skin, discoloration of hair and nails, to dirty-looking residues on laundry. Residents have become accustomed to water treatment as a way of life, but many are unaware that there are now greener, less toxic ways to clean up the water in your home and even in your swimming pool.

GREEN Non-electric Water Softeners

This water treatment system uses minimal amounts of water and salt during regeneration, replacing the harsh and harmful minerals in your water with softer, silkier ions.

GREEN-ER Hydrogen Peroxide Well Water Treatment System

Far less toxic than chlorine, Hydrogen Peroxide works as a powerful oxidizing agent - even more powerful than aeration, chlorine or potassium permanganate. Peroxide decomposes into oxygen and water, leaving no trace of chemical residues. For problem well water containing iron, iron bacteria, manganese or hydrogen sulfide gas, this is a great choice and works safely with your septic system.

GREEN-EST Ozone Generated Well Water Treatment System

A fully automatic ozone based system is a reliable and effortless way to treat the water in your home. It harnesses the natural power of ozone to provide clear, fresh drinking water without using harsh, toxic and expensive chemicals. This provides a green solution for the control of hydrogen sulfide, iron staining and Sulphur reducing bacteria in your water.

A GREEN Pool is Actually a Good Thing

It's now possible to sanitize and de-chlorinate your swimming pool using an all-natural, low maintenance and chemical free system. This set up easily attaches to your existing pool system and uses safe NSF certified materials to effectively sanitize the pool water, killing 99.999% of bacteria, viruses, fungi, algae, mold, and mildew. This method also maintains PH-levels and requires no refilling, ongoing maintenance, or independent power.

Looking to 'green' up your family's water? Get a free water test from the experts at Land O' Lakes Water Treatment and find out what's going on in your water.

Treating Bad Water Good Since 1980

Offering water softeners, hydrogen peroxide and ozone generated well water treatment systems, pool sanitizing systems, iron filters, chemical pumps and drinking water systems, Land O' Lakes Water Treatment has been serving residents in Pasco & Hillsborough Counties since 1980. They specialize in same day or next day service because they focus on a 15-20 mile radius from their shop in Land O' Lakes. Call for a free water test or more information **(813) 996-4479.
